Comprehensive Oral Care

Offering relief of the symptoms associated with oral inflammation, PERIOPATCH® is a step toward MIS' becoming a fully engaged oral-care company.

Established in 1995, MIS Implants Technologies is a global leader in the development, design and production of advanced products and innovative solutions aimed to simplify dental implantology. The company offers a comprehensive range of dental implants and superstructures as well as a large variety of solutions for oral restoration and for a better quality of life.

After extending its surgical reconstruction solutions with a line of advanced bone grafting materials, MIS has recently launched PERIOPATCH, a hydro-gel based product, aimed at the relief of the signs and symptoms associated with oral inflammation. The introduction of PERIOPATCH is a major step forward in terms of MIS becoming a fully engaged oral care company.

Applied directly over the affected area, PERIOPATCH functions as a dual-purpose product. It gently adheres to the wounded tissue, avoiding the invasion of outside stimuli into the wound and absorbing the exudates produced during the inflammatory process.

PERIOPATCH forms a local protective seal over inflamed, irritated or wounded gingiva and oral mucosa and promotes their natural healing without causing side effects. It proffers a prompt pain relief, restores the wound balance and provides sustainable protection from further irritation.

An FDA and CE approved medical device, PERIOPATCH can be used for multiple indications and as a complementary post-treatment appliance after many dental procedures such as surgery (to enhance suture healing or as a post surgical dressing), scaling and root planning, extractions and dental impressions.
