# Table of contents

<b>1. FUNDAMENTAL ANATOMY</b> .....	
1.1. Embryology	
1.2. Bone – Quality/density – Quantity	
1.3. Muscles	
1.4. Blood supply	
1.5. Innervation	
1.6. Temporomandibular joint	
<b>2. HISTOLOGY</b> .....	
2.1. Incision and dye techniques	
2.2. Implant – bone interface	
<b>3. PHYSIOLOGY</b> .....	
3.1. Blood	
3.2. Immune reactions of the body	
3.3. Wound and bone healing	
<b>4. PATHOLOGY</b> .....	
4.1. Anatomic changes and consequences due to edentulism in elderly	
4.2. Bone diseases, bone damage, changes in the soft tissue and neoplasias	
4.3. Systemic diseases and disorders	
<b>5. DIAGNOSTIC PROCEDURES INCLUDING IMAGING</b> .....	
5.1. Pre-implant diagnostic evaluation	
5.2. X-ray techniques	
5.3. Computer tomography	
5.4. Navigation	
<b>6. INDICATIONS/CONTRAINDICATIONS/CLARIFICATION OF RISK FACTORS</b> .....	
6.1. Indications for endosseous implants	
6.2. Contraindications for endosseous implants	
6.3. Patient education	
6.4. Risk factors and criteria for success	
<b>7. MATERIALS</b> .....	
7.1. Implants	
7.2. Superstructure	
<b>8. PHARMACOLOGY/ANESTHESIA</b> .....	
8.1. Antibiotics	
8.2. Anesthetics and anesthetic procedures	
8.3. Blood coagulation and anticoagulants	
<b>9. ORAL IMPLANT PLACEMENT TECHNIQUES</b> .....	
9.1. Endosseous implants	
9.2. Macrostructure	
9.3. Macrostructure/surface	
9.4. Incision and wound closure	
9.5. Soft tissue management	
9.6. Augmentation and membrane technique	
9.7. Bone harvesting	
9.8. Implant loading	
9.9. Criteria for success	
<b>10. SPECIAL TECHNIQUES FOR THE IMPROVEMENT AND PREPARATION OF THE IMPLANT SITE</b> .....	
10.1. Sinus floor augmentation	
10.2. Nerve transpositioning	
10.3. Distraction osteogenesis	
<b>11. IMPLANT PROSTHODONTIC PRINCIPLES</b> .....	
<b>12. PREVENTION AND RECALL</b> .....	
<b>13. COMPLICATIONS, FAILURES AND THEIR MANAGEMENT</b> .....	
<b>14. MONITORING AND EMERGENCY MEDICINE</b> .....
