

## **Use of Gengigel in oral surgery: past experience and future indications**

Prof. Dr Zoran Lazic

Head of the Clinical Dentistry Military Medical Academy, Belgrad

The use of hyaluronic acid in dentistry today is very wide spread and it can be applied in an increasing number of indications. In this presentation will be shown up to now experiences on the usage of Gengigel prof within the implantology-immediate implantation and the appliance protocol of Gengigel prof. Special attention is given to the possibility of it's application in everyday practice in some new indications. Results of two studies will be shown concerning the application of hyaluronic acid-Gengigel prof in treatment of alveolitis and after extractions at the patients on anticoagulant therapy. The results show the possibility of applying hyaluronic acid in this indications, with the need to conduct research on the larger number of patient.
